

Pressure relief valves type ARAM

two stage, in line mounting - G 3/4" and G 1 1/4" threaded ports

ARAM are two stage pressure relief valves with balanced poppet, designed with threaded ports for in-line mounting.

In standard versions the piloting pressure of the poppet (1) of the main stage (2) is regulated by means of a grub screw (3) protected by cap (4) installed in the cover (5). Optional versions with setting adjustment by handwheel (6) instead of the grub screw are available on request. Clockwise rotation increases the pressure.

Also available in safety option with sealed regulation:

/PED conforming to PED Directive (2014/68/UE). The valves are factory set at the pressure level required by the customer with a flow through the valve as shown in section (6). For this version the P, Q limits are shown in section (10).

ARAM can be equipped with a pilot solenoid valve (7) for venting or for different pressure setting, type:

- DHI for AC and DC supply, with **cURus** certified solenoids
- DHE for AC and DC supply, high performances with **cURus** certified solenoids

Threaded ports: **G 3/4"**, **G 1 1/4"**

Max flow: **350, 500 l/min**

Max pressure up to **350 bar**

(1) Only for ARAM with solenoid valve for venting and/or for the selection of the setting pressure.

(2) For valves with multiple pressure settings, the eventual /PED option is relevant only to the first main setting.

The second (and third) pressure setting are not sealed and their regulation must be lower than the /PED one.
